

German Red Strawberry

This unique German heirloom is one of the best tasting tomatoes available. The bright red fruit are strawberry or heart shaped and very meaty with few seeds. The beautiful fruit average 10-12 ounces but in my experience can grow quite a bit larger. This variety was very productive for me. Indeterminate, regular leaf foliage. (85-90 days from transplant)

Cherokee Purple

Originally grown by the Cherokee Indians, this wonderful heirloom is more than 100 years old. The seed for Cherokee Purple was sent to Craig LeHoullier by John D. Green of Sevierville, Tennessee. John D. Green received the seed from a lady who obtained them from her neighbor who claimed that they were originally grown by the Cherokee Indians. The fruit of Cherokee Purple is a dark purplish pink color and often has green shoulders. The large fruit average 12 oz and are delicious. The plants are very productive and reliable. One of the best! Indeterminate, regular leaf foliage. (75-80 days from transplant)

Brandywine (Landis Valley Strain)

A legendary heirloom originating with the Amish and named after the Brandywine River in Chester County, Pennsylvania. This strain is thought to be the true red Brandywine. The red medium size fruit are very uniform and the plants have regular leaf foliage. Excellent taste. Indeterminate, regular leaf foliage. (80 days from transplant)

Black Plum

Very productive variety that originates in Russia. The 2" fruit are mahogany color with green shoulders and are excellent in salads. Can also be used to make rich colored sauces. The plum shaped fruit are born in trusses and the large plants are very productive. Indeterminate, regular leaf foliage. (75 days)

Ashleigh

One of my favorites of the season! Huge, meaty, red, delicious tomatoes produced in abundance! The largest was 3 lbs but most are in the 1-2 lb range. The fruit is gorgeous with old fashioned ribbing at the stem end. Neil Gillard originally introduced this tomato to [Seed Savers Exchange](#) and obtained it near Eganville, Ontario from the owners of the summer cottage he had been staying at for the last 25 years. They got it from their neighbor. It is originally from Lazec, Macedonia. Neil named the tomato after his niece Ashleigh. Indeterminate. (85 days from transplant)

Paul Robeson

A Russian heirloom named after the opera singer and equal rights advocate. Paul Robeson tomato is well known among tomato connoisseurs as having a distinctive smoky flavor with a perfect acid to sweet balance that is delicious. The dusky brick red fruit have green shoulders and average 8-10 ounces. Indeterminate, regular leaf foliage. (80 days from transplant)

Jaune Flamee

A delicious heirloom originating in France. This is a beautiful tomato with orange skin and reddish orange flesh. The fruit are 2-3 ounces (larger than a cherry), growing in clusters of 5-6. Very high yields of tangy, delicious fruit. Great for salads or snacking. Indeterminate, regular leaf foliage. Highly recommended! (75 days from transplant)

Franchi Giant Pear

Beautiful heirloom tomato that can grow up to a pound. The large red pear shape fruit have vertical ribs and are quite meaty. A nice all purpose tomato. Indeterminate, regular leaf. (85 days from transplant)

Yellow Pear

First described in 1805 but surely much older. The large plants produce hundreds of small pear shaped fruit. Great for snacking or throwing whole in salads.

Andrew Raharts Jumbo Red

Andrew Rahart lived north of New York City and collected seeds from the local immigrants; this is one of the varieties he collected many years ago. One of the best tomatoes that I have ever grown. The healthy plants produce heavy yields of deep red beefsteaks that average 1 lb. A great slicer that is very dense and meaty with exceptional taste and aroma. Excellent producer that we grow as a main crop tomato each year. Strongly recommended. Indeterminate, regular leaf foliage. (80 days from transplant)

Persimmon

An old Russian variety originally brought into the United States by Seed Savers Exchange. The gorgeous fruit is 3-4 inches in diameter, blemish free and a golden orange color similar to a persimmon; hence the name. One of the best tasting gold to orange tomatoes available. The plants are also determinate so there is no need to stake, making this variety excellent for smaller gardens. One of the best! Determinate, regular leaf foliage. (80 days from transplant)

Gray' Sweet Cherry

Our favorite red cherry variety! The enormous plants are literally covered with clusters of small red cherries all summer long! One of the best tasting varieties there is. This would be a good variety for growing on fences or other large structures. Indeterminate. (70 days from transplant)

Dix Doights De Naples

An Italian heirloom that produces huge quantities of medium size elongated fruit in clusters. The name means Ten Fingers of Naples and this tomato is a very old heirloom variety. Disease resistant and productive. Indeterminate, regular leaf foliage. (75 days from transplant)

Djena Lee's Golden Girl

Djena Lee had grown this variety in Minnesota in the 1920's. In 1929 she gave some to Reverend Morrow who preserved this variety for many years. Apparently this variety won first place at the Chicago Fair for 10 years in a row! The medium size golden fruit are very tasty. Indeterminate. (80 days from transplant)

Pink Peach

(aka Landreth's Peach, The Wonderful Peach, Red Peach) Introduced into the seed trade by D. Landreth and Sons of Philadelphia in 1885. The 2 ½ oz pink red fruit have a fuzzy skin like a peach and the flesh is quite sweet. Indeterminate, regular leaf foliage. (75 days from transplant)

President Garfield

Said to be one of the first named tomatoes, as opposed to just "love apple". The 6-10 oz red fruit are very ribbed and ruffled and are similar to Early Large Red in shape but the fruit of President Garfield is larger. Indeterminate. (80 days from transplant)
EXTREMELY RARE.

Black Cherry

One of the tastiest cherry tomatoes of the season. Our customers at the farmer's market seem to agree. The dark purple cherry tomatoes are born in large clusters on very vigorous plants. Very sweet and delicious fruit is great for eating out of hand or summer salads. Excellent paired with red and yellow cherry tomatoes. Indeterminate, regular leaf foliage. (70 days from transplant)

Orange Strawberry

One of the prettiest and most productive tomatoes there is! The heart shaped tomatoes are golden orange with slight ridges on the stem end and a point on the blossom end. The very vigorous vines produced so many beautiful heart shaped tomatoes that the plants toppled over despite the heavy duty stakes that we had installed. Because this variety is so productive we canned quite a few jars and they turned out wonderful; something different than traditional red canned tomatoes! A fantastic variety! Indeterminate, regular leaf foliage. (90 days from transplant)

Calabacito Rojo

A very old heirloom tomato that was documented in Philadelphia gardens as early as 1795. The bushy indeterminate plants can grow quite large and the small red fruit is flattened and slightly ribbed. The fruit has a sweet unique flavor. Disease resistant. Indeterminate, regular leaf foliage. (75 days from transplant)

Red Fig

A historic variety that was grown since the 1700's as an ornamental and for preserves. In the 1840's "tomato figs" became popular because it was an inexpensive way to create a substitute for figs. The Red Fig Tomato is 1-1 1/2" in length and pear shaped, resembling miniature bowling pins. They are an excellent addition to salads or eating out of hand, not to mention essential for making old fashioned "tomato figs". Very productive. Indeterminate, regular leaf foliage. (70 days from transplant)
